## 1. ABSTRACT

We use

## 2. INTRODUCTION

When there is a window of opportunity, smart entrepreneurs all around the world seek the same opportunities. For that reason, there is almost never only one company tackling a problem. In this project, our goal is to build a model to find similar companies when a company is given as an input.

### 2.1. Data

The dataset contains 655,000 companies and contains the description of what the companies do, along with a category label. There are around 55,000 unique categories, and a median of 10 companies per category.

### 2.2. Aims and approach
